What is Tele-Sync™?

Tele-Sync™ is a new soundtrack utilizing the latest in psychoacoustics and neurotechnology to assist you in exploring the universe, your consciousness and pressing upon the boundaries of your belief system.

It is a tool for those willing to dedicate their time to themselves, their inner landscape – discover the parts of yourself you didn't know existed, as well as learn the mechanics of your mind and psyche.

As you listen to Tele-Sync™, your brain hemispheres synchronize to create a coherent state of mind, similar to a laser. It lets your brain operate as one electrical unit instead of two contradicting "personalities." With Tele-Sync™ in the background, everything you intend, and all tasks you perform will be processed by both hemispheres. This lets you achieve peak human performance in a short amount of time.

Furthermore, as you continue to use Tele-Sync™, your brain will learn to integrate the new hemispheric connections in the physiology and let you access peak states even without the audio stimulus. It may help to use a verbal "trigger" to achieve this. For example, as you listen, you may repeat "I am in Brain Synchrony". If you then repeat this in your daily life, you can learn to achieve this same brain synchrony without the use of the audio technology.

The soundtrack also contains "silent subliminals" – speech that has been encoded into a frequency range that you cannot consciously hear. It is similar to ultrasound – the x-ray-like technology that is used to look at babies. Research has shown that the brain registers these sound frequencies even though you can't consciously perceive them. This lets the verbal affirmations go straight into your subconscious and create deep changes from within.

Bear in mind, however, that even the subconscious has a filter – and you cannot be "brainwashed" by listening to subliminal affirmations. Your subconscious knows what is good for you and what is not – its main objective is to keep you alive.

Furthermore, the soundtrack has been encoded with energetic waves to engage your biofield, resulting in a whole-body meditation experience. The track helps with spiritual development, visualization and manifestation, energy work, remote viewing, out-of-body exploration, love meditation, and more. Truly, you are limitless, and it's up to you to decide what you do to push yourself outside the boundaries of your conscious mind.

You need stereo head-/earphones with a frequency response starting at <20 Hz and ending at >20,000 Hz, and they need to be wired, as the Bluetooth compression may corrupt the audio signals.

If you want, you can combine the track with transcranial magnetic stimulation, with a headset such as the *NeoRhythm by Omnipemf*. In that case, set it up to delta and theta frequencies, and wear it simultaneously with your head-/earphones. Do not combine the soundtrack with other technologies unless indicated by your mentor.
